MONTREAL

A black and white photograph showing the upper portion of a multi-story building. The facade is made of light-colored, possibly stone or brick, with a grid-like pattern of rectangular windows. Three windows are visible on the upper floor, each with a dark frame. Below them, the lower floor features larger, arched openings, some of which are partially obscured by shadows and structural elements. The overall appearance is that of an old, industrial or institutional building.

Photos by Notman, Montreal.

Lord Shaughnessy is the honorary

Lord Shugglessey is the honorary chairman of the Campaign Committee, while Mr. E. W. Beatty, President of the Chamber of Commerce,

Others actively interested in the campaign work are Sir Vincent Meredith, president of the Bank of Montreal, Lord Atholstan, proprietor of the Montreal "Star", Sir Charles Gordon, Sir Montagu Allan, and a committee of 150 men prominent in Montreal's banking, transportation, shipping, and general business circles. In addition to these there is a strong con-

of the Graduate Students Society, with a membership in many parts of the world, headed by Major G. C. MacDonald, who won honors serving with Princess Patricia's Light Infantry. It is stated by the University authorities that the receipts of McGill declined by \$40,000 during the first year of the war, which recently increased to a drop of \$100,000 in the closing years owing to the absence of every fit man on active service with the Canadian Expeditionary Force. Sir Arthur Cope-

ates that since the conclusion of the war the registration at McGill University has doubled, necessitating an increase in the staff and the erection of new buildings, while the depreciated buying power of the dollar has hit both the university and the staff hard. As a result of the campaign it is hoped to recoup the university and place McGill in a position to continue its work and to keep pace with other great universities.

[illegible]

years, such as the late Sir William Macdonald and Lord Strathcona, helping the University with substantial grants. The pre-eminence of McGill in Canada is due, in large measure, to the policy of Sir William Macdonald, who, as a pioneer of the course of Engineering was enlarged by the Department of Practical Science, and later into the Faculty of Applied Science.

McGill's culture is taught under the auspices of McGill at the University of Quebec. In 1910, Anne de Bellefeuille, a McGill student, gave work in teaching improved methods of instruction in the Province of Quebec, but also throughout the Dominion, and in the Western Canada. At Macdonald College also is a school for Teachers and a school for the study of educational standards.

McGill's culture is also a recent development which shows the needs of the up-to-date and alive to the needs of the business organization. Here business organization and the needs of the business and industrial organization are the basis of the culture of the business and industrial organization.

McGill has produced some of the greatest minds of our time, and men and women of science and of letters, and of the highest standing in the administration inaugurated by a McGill education. The culture of McGill has always been similar work for the future of the world.

[illegible]

The Country Life Problem

Not long ago, says a writer in the "Problems of Democracy" department of the Literary Digest, a well-known traveler and writer was being shown through the immense Cavalier building of a Middle-Western State "just as the great army of officials we employ," said his guide, "every man of them was born on a farm." And then the visitor was shown through a quarter of the city where you can go a mile and not only the homes of retired farmers.

Yet, comments the Literary Digest writer, the boys on the farm dream of jobs in town, and old folks on the farms dream of homes in town, and as soon as they can arrange it, they come to the city, and the town, and move away. In less than five years' farming States, meanwhile, you occasionally see a farm abandoned outright but even the culture of farming lay prosy is defensible.

In "The Country Life Movement," Mr. L. H. Bailey observes, "Farming by proxy or by any absentee method is as disastrous in the long run as the doing of any other business by proxy. I hold that it is essential that the very best people live actually on the land. The crops are there. The livestock is there. The machinery is there. All the investment is in the place itself. If this business is to be most effective, a good man must be constantly with it and manage it. A farm is not like a store or a factory that is shut up at night and on Sunday. The more difficult and complex the farming business becomes, the greater will be the necessity that a good man remain with it."

"The fundamental need," declares Mr. Bailey, "is to place effectively educated men and women in the open country." In his opinion all else depends on this. No formal means can be of any permanent avail until men and women of vision and with trained minds are at hand to work out the plans in an orderly way. Agriculture is now a school subject. It is recognized to be such in the schools of every state in the minds of the people, and of educationalists and legislators. It has found its way into the high schools. In Western Canada it is the outstanding department in our Universities.

But do the young people thus trained return to the open country? Some of them, of course, but a lamentably small percentage of the total. Why not a larger number? Does farming pay? Is life in the open country attractive? Farming has its off years, and sometimes series of years, when the financial returns are not commensurate with the effort put forth. But the same thing is true of business generally. And assuredly farming today pays better than in the days of our grandfathers. There are still many hardships in the more remote and pioneer districts, and conditions generally may not be quite so favorable as in the years before the war, but neither are conditions in the cities as favorable, with thousands of men out of employment. Such a situation is, however, only temporary; it will be overcome both in city and country.

Life in the open country is not as attractive as it should be for other reasons. The recreative life of the country community greatly needs to be stimulated. Not only games and recreation days need to be encouraged, but the spirit of relief from civilization and the desire to toll must be encouraged. The country population needs to be livened up.

How is this awakening to be brought about? The small towns and villages, which are the real centres of all country districts, and whose very existence depends upon their surrounding farming communities, have a duty and an opportunity in this respect. In his admirable book, "The Town's Country," Mr. H. P. Douglas devotes a chapter to "The Town's Country." Says Mr. Douglas, "The town's country is the area which trades with it, which makes common cause with it in buying and selling, in credit and transportation facilities." Its typical functionaries are the retail merchant, the banker, the postmaster, the doctor, the implement agent, the railway agent.

Moreover, the town's country is the area which comes to it for play, education and worship. Here are the country's moving pictures, its exhibition and sports grounds, and its churches. The country's high schools are here, and most of its ministerial and religious life. Here, though the farmer may not directly share in them, are those social groups and activities which he imitates and possibly envies. Most of the social organizations to which he may belong centre here.

Therefore, the small town has a duty to its own particular "country." And the opportunity is as great as that. Among the chief needs of the farming community today is wholesome recreation. There is little country life in the open country, except what centres in the small towns and villages. Its inhabitants want one man has called "the inconvertible condition of country life." In almost every other respect, life in the open country has improved. It is a less isolated life. Railways, telephones, automobiles have greatly benefited farmers. But is a better life? No one pretends that it is. There is no play for children; no recreation for the young folks. Yet it must be made jollier or we shall see more and more farms abandoned or farmed by proxy and more and more farm people moving to the city.

If we are to "place effectively educated men and women in the open country," men and women of vision and with trained minds—if we are to place them there and keep them there, we must promise them not only prosperity, but a jovial, sociable, merry existence which they will honestly prefer to life in town.

U. S. Imports Canadian Wheat

Large Quantity Has Gone Over the Line Recently.

A solid train of forty-two cars of Saskatchewan wheat passed through North Portal over the Soo line recently, en route to buyers and millers in the United States, who have been importing the wheat in large quantities in order to get as much as possible across the line before the duty imposed by the Young tariff bill, which is expected to be put into operation in that country, becomes law. Twenty-five carloads of Alberta cattle were also sent across the border recently.

Mrs. A. Crawford Tells How Cuticura Healed Little Girl

"My little girl's trouble started with small pimples on the back of her head and they spread over her body. She became very itchy and they itched and burned terribly. She scratched and irritated them and they later developed into sore eruptions. Her hair fell out in places and she became thin and dry, and scales fell out on her clothing."

"I used a free sample of Cuticura and the pimples commenced to dry up. I bought more and when I had used one cake of Cuticura Soap and one box of Cuticura Ointment the 'was healed.' (Signed) Mrs. A. Crawford, 421 Parier St., Bangor, Maine, Jan. 22, 1923.

For every purpose of the Cuticura, both Cuticura Soap, Ointment and Talcum are wonderfully good. Cuticura (Cuticura) is sold throughout the Dominion, Canadian House of Commons, 111 St. Paul, N. B. Montreal. Cuticura Soap without cost.

"Your Teeth"

By Rea Proctor McGee, M.D., D.D.S., Editor of Oral Hygiene.

FRACTURED JAWS

Copyright, 1921, by Rea Proctor McGee.

Usually when a jaw is fractured everybody knows about it. But there are cases—in fact a good many cases—where a jaw has been fractured either by a fall, or in boxing, or football, or in almost any sport—and the patient has never known it and it is only by an X-ray examination for some other condition that the year is discovered and it is realized that at some previous period the jaw had been broken.

Usually a broken jaw is very difficult to hold in place until it mends. Where the pieces are not properly held by an X-ray examination, but the fibrous union is a sort of a cartilage or plate that grows across the broken spot and makes an extra joint. This condition, of course, cripples the jaw so that mastication is almost impossible.

When a jaw is fractured it is also usually necessary to keep it in position, so that the jaw will be as strong as ever.

During the war there were a great many cases of fractured jaws from gunshot wounds, from explosion and so forth, falling out of airplanes and so on, and much was learned in regard to how to form a joint that was not known before.

When a jaw has been injured and remains tender for any length of time, it should be X-rayed carefully to find out whether or not there has been a fracture.

Fractures of the upper jaw are more rare than fractures of the lower, because the upper jaw is not exposed to the lower jaw.

The lower jaw is more of a buffer than any bone in the body and is saved from breaking by its very wide movements.

Fractures of the upper jaw usually lead more quickly than do fractures of the lower, and also, the patient being surrounded by "muscles" that tend to pull it into place, does not present the usual difficulty in splinting.

Fracture of the upper jaw will cause very severe disfigurement if it is allowed to go unattended.

Miller's Worm Powders not only exterminate intestinal and other worms, but they are a remedy for many other ailments of children. They strengthen the young stomach against biliousness and are useful in building the child's health and confidence. They will be found useful and they will serve to allay pain and grating in the stomach, from which children so often suffer.

Pioneer Dies At Vancouver. Vancouver—Joseph Guichon, 78, a pioneer of British Columbia, and owner of the second largest ranch in the province, embracing 30,000 acres, died here recently following a long illness. A widow, four daughters and three sons survive.

To Finish Big Store.

The new Hudson Bay store building at Victoria, B.C., the completion of which has been suspended since the war, will be finished and opened for business in the early autumn of this year.

Building In Western Canada. Contrata for building construction during January and February of this year in western provinces totalled \$5,547,300 in value against \$3,000,000 for the first two months of last year.

Minard's Liniment used by Physicians

Necessary That Canada Should Grow Nation Must Have Men, But Not Undesirable

Both war and the railway situation require that Canada must grow, in the opinion of the Journal of the Canadian Farmers' Association, which says that to grow up to these we must "people the vacant spaces." However rigorous the United States may be in its immigration regulations, due to the fact that they are approaching the saturation point, Canada's policy, the Journal states, can well afford to differ from that of her neighbor.

"It is well to remember," the Journal adds, "that a prosperous and advancing country has a greater digestion capacity than a stagnating country. Let us winnow out individual undesirable, but men we must have. Not least, we must seek to keep our own sons from drifting southward."

IS YOUR STOMACH SOUR? DO YOU BELCH GAS?

If you have sour ridings from the stomach, feel flat and uncomfortable, just try twenty drops of Nerville in sweetened water. Relief will come quickly. Nerville, the gas, sweetens the stomach, makes you fit and from a flat, bloated, and general household remedy for many of the ills that constantly turn up, Nerville is more useful in every family than a 35 cent bottle of good old "Nerville."

Will Be Honored Guest.

The Prince of Wales has accepted an invitation from the West End Committee to attend a luncheon in London, on June 24, to be presided over by Lord Harewood, the president. It is interesting to note that it is just over 100 years ago that the committee had the honor of entertaining the Duke of Clarence, afterwards King William IV., at the same luncheon. The Prince's great-great-granduncles.

Heart Weak, Nerves Shattered After the "Flu."

In a large majority of cases those who survived the last epidemic of Spanish influenza were left with weak hearts, shattered nerves, impoverished blood, and the whole system has been left in such a weakened and exhausted condition that it has been impossible to get back your old health and strength.

If you are in this condition there is one thing to be done—take a course of Miller's Heart and Nerve Pills. These pills quickly and safely strengthen your nerves, tone up your blood and heart.

Mrs. W. Foster, 14 Saxon St., Toronto, Ont., writes: "I was left with a very weak heart and nervous system from the 'flu.' My nerves were shattered, and I felt very weak. In my heart I could not sleep much at night. I took several doctors' medicine without getting any better. My husband got me to try Miller's Heart and Nerve Pills, and after taking six boxes have been well and no longer feel the 'flu.'"

Price list a box at all dealers or mail order. An extraordinary price by The T. Millum Co., Limited, Toronto, Ont.

Burbank's Latest

Has Evolved New Wheat Which Is Exceedingly Early.

After experiments extending over eleven years, Luther Burbank, the great California horticulturist, is said to have evolved a "quality" wheat, containing over fourteen per cent. grain, an astounding improvement in this grade. The new type of wheat has a very large white, shiny kernel and produces a very white flour.

The new wheat, according to Mr. Burbank, is an exceedingly early wheat, being the earliest of some four or five hundred varieties which he has been growing. It has been tested alongside sixty-eight of the best wheats in the world, and has exceeded them all in yield, uniformity and all other desirable characteristics. The growth is strong, being four feet on good ordinary soil, it differs unusually well, and on ordinary valley soil, with special cultivation, care, or fertilizing, produced this summer at the rate of 49.8 bushels per acre, every plant and every kernel being uniform. The wheat was originally grown from one single kernel.

More than one-third of the children in Egypt die before the age of five years.

Nature was preoccupied when she put long hair on hunting dogs and filled the woods with bears.

She Feels As Fine As A Growing Girl, Says This Winnipeg Woman

"My heart goes out to anyone suffering from indigestion and nervousness. My story will tell them all about this grand Tanlac, for it is the medicine that relieved me of these troubles and restored my health," said Mrs. S. Jackson, wife of a prominent business man residing at 429 Agass St., Winnipeg.

"Before I got Tanlac I was in a dreadfully nervous condition. I couldn't stand the least little noise, and at times I became so upset I was afraid I would go into hysterics. My appetite was so poor I had no desire to eat, and couldn't relish my meals."

Livestock For England

Edmonton District Has Made Important Commercial Consignment.

A livestock shipment of importance to Central Alberta breeders has just been made from Edmonton consisting of four carloads of choice steers, all weighing about 1,400 pounds, bought from their original owners at the state of a pound, which was left for England. This is the first commercial consignment ever made from the Edmonton district overseas, and it is expected to be the precursor of a regular traffic.

A Household Medicine—They

are acquainted with the sterling qualities of Dr. Thomas' Electric Oil in the treatment of many ailments would not be without it in the house. It is truly a household medicine and as it is so useful, it is not surprising that many complaints it is an inexpensive medicine. So, keep it at hand, as the call for it may come unexpectedly.

Still Working On Lignite Problem

Additional \$280,000 Needed For Building and Further Experimenting.

Experiments are still being made at the plant operating at Brindley, Saskatchewan, under the Lignite Utilization Board. "The operations have not yet reached the stage of production on a commercial basis," says T. M. Molloy, provincial commissioner of Labor and Industries. "Uncertainty of delivery of material makes it impossible to tell when the plant will be in operation and when that is accomplished it will still remain to determine the commercial possibilities of the various methods with which they have been experimenting."

The experiments are being carried out under the joint direction of the Federal, Manitoba and Saskatchewan Governments. The board has found that it now needs an additional \$280,000 to complete the buildings and go on with the experiments and the Saskatchewan Government has agreed to contribute \$70,000 of this amount.

Valuable Furs Sent to U.S.

Furs to the value of \$150,000 were sent to the United States through this city in 1920, according to annual report of the United States custom here.

at all. My food didn't digest properly, and I was in a badly rundown condition. My story will tell them all about this grand Tanlac, for it is the medicine that relieved me of these troubles and restored my health," said Mrs. S. Jackson, wife of a prominent business man residing at 429 Agass St., Winnipeg.

"Well, Tanlac has rid me of all my troubles, and my appetite is such that I feel as fine as when I was a growing girl. I eat good and hearty and enjoy my meals, and never have a rare or worry. Why, I feel as fine as anybody could want to feel, and I can't help but be delighted and enthusiastic over this wonderful Tanlac." Tanlac is sold by leading druggists everywhere.

Canadians Are Thrifty

New High Record Reached In Savings Bank Deposits.

Savings bank deposits in Canadian banks totalled \$139,142,146 at the end of March this year. This total easily broke a new high record and represents approximately \$146.50 per head of population, taking the latter at 9,600,000.

Minard's Liniment Lumberman's Friend.

Holstein Again Breaks Record.

A Colony Farm Holstein has again broken a record. Colony Farm Holstein, a junior two-year-old, produced 12,000 pounds of milk and 713 pounds of butter during the year. This record is regarded the high one in both American and Canadian Holstein associations.

THE BEST MEDICINE FOR LITTLE ONES

Thousands of mothers state positively that Baby's Own Tablets are the best medicine they know of for little ones. Their experience has taught them that the Tablets always do just what is claimed for them and that they can be given with perfect safety to children of all ages. Conclude Dr. Branden, Chm., writes: "Baby's Own Tablets are the best medicine I know of for little ones. I thought I would lose my baby before trying the Tablets, but they soon made him healthy and happy, and now I would not be without them. The Tablets are sold by medicine dealers or by mail at 25 cents a box and 100 for \$2.50. Write to Williams' Medicine Co., Brockville, Ont."

All the cork used in the world in a year weighs little more than 1,200 tons.

HON. T. A. CRERAR SAYS GET WILD LANDS LISTED

Leader of National Progressive Party Endorses Principle of Legislation Requested by Western Canada Colonization Association and the Multi-tude of Supporters Throughout Manitoba, Saskatchewan and Alberta.

Hon. T. A. Crerar's statement reads: "The proposal of the Western Canada Colonization Association that an inventory of uncultivated lands be taken under Governmental auspices in the prairie provinces, and that the Crown's half land should be offered to settlers, is, I think, an excellent one. The fact that the price so fixed would be made the value for assessment of the special Wild Lands Tax would keep the owner of the land from a price that was reasonably fair. Land speculation, and that matter speculation in other natural resources, has been one of the worst evils this country has suffered from."

It is generally agreed that Canada needs more people but an immigration policy can only have permanent success if the people who are already living here are relieved of the artificial handicaps under which they have labored in the past, of which these speculations in land are the more people that come into the country the higher the land speculator raises the price, in the best interest therefore of the people of Canada the proposal that land held out of use should be made available for those who want to use it is sound and deserves the support of all good Canadian citizens. This step is in line with what the organized farmers of Western Canada have advocated for many years."

Physician's Startling Discovery

Says People Can Live In Perfect Health Without Meat

That the stomach is a superfluous organ is the startling discovery of Dr. Victor Pancher, reported to the Academy of Medicine. Affirming that he has successfully removed the stomach from a woman fifty years old who was afflicted with a highly inoperable cancer, he reports that the operation also cured her of cancer. "The stomach's action is purely preliminary," stated Dr. Pancher. "The mechanism for the vital part of the digestion is in the small intestine with the intervention of pancreatic juice and the bile. Therefore, providing the patient follows a light diet, the stomach may be dispensed with advantageously."

Prince Henry To Go In Army

Fond of Sports and Immensely Popular With Public

Prince Henry, the third son of the King and Queen, who attained his majority on March 21, is destined for a military career. Although thrust somewhat in the background by his older brother, the Prince of Wales and the Duke of York, Prince Henry is immensely popular with the public. In stature he exceeds his brothers and is fond of sports and outdoor life. In presence of his inclination to be a soldier he went through the army class at Eton and afterward studied at Sandhurst, the English West Point. Last August the Prince was gazetted a second lieutenant of the King's Royal Rifle and at the same time to the Thirtieth Hussars at Aldershot.

Thieves Were Original

Entered Church Near Lille, France, and Stole Bell

At a time when such a large percentage of Frenchmen are busy specializing in thefts of jewelry, pocketbooks, and the more easily portable luxuries of life, it is almost refreshing to hear of a group of thieves who were original. As was shown by the raffish who devoted their attention to stealing a church bell weighing as much as a half ton. Recently a considerable force of motor landers entered the ruins of Louvain Church, near Lille, France, and succeeded in hauling out a huge bell and placing it upon their lorry. They were surprised in the act by the night watchman, who made an attempt to resist the removal of the bell but was bludgeoned by the bandits, who got clean away.

The Water Spider.

A correspondent describes a peculiar spider that lives under water the greater part of its life. It builds a dome-like nest of silk among the reeds in ponds. "It has, and fills the nest with a strange honey-like fluid," says the writer. "In autumn it makes another nest at a greater distance below the surface of the water, and, having sealed it inside, it drops into the water. The spider looks like any other, but as soon as it is put back the bubble of air that surrounds its body makes it look like a piece of oakleaves. It is the only spider that has taken to a wholly aquatic life, says the writer—Canadian Life."

Seized Liquor Valued At \$40,000.

Sydney, N.S.—Seizure of liquor valued at \$11,000 marked the fifth day of the long dry Sydney strike. The value of liquor seized in the Sydney district since May 29th now totals \$40,000 dollars.

DAN McNEILL, President Dominion Football Association. D. R. ROY, Secretary-Treasurer, Dominion Football Association.

Canada To See "All Star" Football

Tour of Scottish Team Is Creating Wildest Enthusiasm.

When the officers and members of the Scottish All-Star football team arrive in Halifax on May 18th, the desire of all Canadian football men to have an Old Country professional football team of players come to this country, will be tripled. The Dominion Football Association, through President Dan McNeill and Secretary-Treasurer D. R. Roy, have completed final arrangements after several month's efforts and development, and are now on their way to the Atlantic seaboard to welcome the party on behalf of the Association which they represent.

The party of sixteen players, who have been chosen for this long departure, will be met at the airport by the band of sports and cheerleaders. The party of sixteen players, who have been chosen for this long departure, will be met at the airport by the band of sports and cheerleaders. Fort Norman Oil Find Is Outstanding Event

Officials Issue Warning However Against Speculation Companies.

"Present indications are," says a statement issued by the department of mines, that the reported discovery of oil below Fort Norman on the Mackenzie River may prove to be one of the outstanding events of the mining industry of Canada."

Officials of the department of mines, however, that "the indiscriminate purchase of stock in many of the mushroom oil companies that are being formed with the avowed purpose of securing petroleum claims in the Mackenzie River basin."

Little Talk On Life. "Life," said a tailor, "is a piece of silk given to each man to make a coat of it. Some men make a coat of it, some a hat, some a pair of trousers, and some a pair of shoes. Each man must suit his coat according to his cloth, and as he makes it as much as wear it, he must be well-fitted or ill-fitted."

Another Monster Egg.

A Plymouth Rock Egg, owned by Louis Laporte, of Somerset, has attracted the field as competitor for the largest of living the large egg. The Winnipeg Free Press received a specimen of this egg's fossilized effort—an egg measuring 9 1/4 inches around and 4 1/2 inches high and 7 1/2 inches around the middle.

The art of water-scooping has been a local industry for more than 5,000 years.

The Demand Is Growing In The British Market For Canadian Cattle

Radium Is Lost In Mysterious Manner

Authorities at Hospital Decline to Give Any Information.

Radium valued at several hundreds of pounds, belonging to the Sheffield Royal Infirmary, has disappeared mysteriously.

The authorities at the hospital—a voluntary institution, supported by public subscription—decline to give any information beyond the fact that the loss is "due to the unfortunate error of certain persons."

The radium is stored and prepared for medical purposes at the University of Sheffield, and then transferred to the hospital.

A search among the city's stores with a special apparatus is stated to be contemplated.

In 1914 a quantity of radium worth £1,000, which had fallen on the floor at a ward in the Royal Infirmary at Liverpool, was recovered from a dust cart. It was located in the cart by Professor Wilfrid, with an electroscop.

The contents of the cart were then put into buckets by the hospital radiologist, and the radium was sent out by one of the professor. The twelfth bucket contained the radium.

Constructed Propellers From Crude Material

Engineer in Frozen North Used Dog Signboards and Elk Hide Goggles.

With a few dog signboards, half a dozen mouse hide and some crude Mackintosh tools, Mr. J. A. Johnson, a Hudson's Bay Company steam boat engineer at Fort Simpson in the north-western Arctic, has constructed propellers with which one of the two all-metallic propellers of the same type, returned from Stuppan to the river Rhine. The story is told in this month in The Beaver Magazine of the Hudson's Bay Company.

The Beaver's correspondent, an eyewitness, states that both machines crashed at Fort Simpson, and the propellers broke their propellers. The propellers broke their propellers.

The second plane, with four men, descended to construct the propellers. The second plane, with four men, descended to construct the propellers.

The Idle Worker

Large Number Are Unemployed in United Kingdom.

An attempt is to be made to mitigate the grave danger attending the presence of the large numbers of unemployed workers who through London's streets. At present 10,000 of the unemployed persons are unemployed in the United Kingdom.

British Consuls Will Fight Troubles.

Among the passengers arriving on the Canadian Pacific steamer Metacomb, were Sir George and Lady Parkin. Alluding to the present conditions of Great Britain, Sir George expressed his opinion that the national courage of character and stability of temperament might be relied upon to right all the troubles that surround the nation at present.

New Governor Appointed.

Plans for the Winnipeg early development of the oilfields in Northwest Canada—which include retention of three-fourths of the oil discovered for the province—were revealed by D. S. Finnie, Winnipeg, who announced that his brother, Oswald Sterling Finnie, London, was appointing the position of administrator of the territories, a post that virtually amounts to a governorship of that vast wilderness.

"There is a steadily growing demand for all Canadian cattle in the British market, despite the embargo and the fact that it costs approximately \$100 to ship a steer from Western Canada to England and pay the freight charges within ten days of landing."

This statement was made by John Burns, general manager of the P. Burns Company. In speaking of the English market, Mr. Burns said that for the past two years there has been no demand. Now, in spite of the very high freight rates, both from here in the west and across the Atlantic, despite the fact that Canadian cattle are in England must be for "Canadian slaughter, this market was developing and the demand is rising."

"There is actually a shortage of cattle in Western Canada at the present time, to take advantage of this period of opportunity."

Within the last few years the marketing conditions for cattle in the west have been undergoing a great change. The market is now more thickly settled and individual packers in the months of September, October and November. It is evident even to the layman that this produces an unbalanced market condition. It meant that the packers were loaded up with stock at one time of the year, and received little during the other nine months. A glutted market and a fall in prices were almost always the result.

But with the coming of the country the big cattle ranches have gradually disappeared. More intensive cultivation has been followed by "more numerous small herds of cattle and brought a better finished product to the market. Today the cry of many of the big men of Western Canada farming is for even smaller farms. Gradually the market is being fed as the demand grows. Mr. Burns hopes that this tendency toward smaller farms will be a steady marketing of cattle over the greater part of the year. This will tend to bring fluctuation in prices and better returns for the farmer, packer and consumer."

The man who held on to livestock in the early days of the business, himself in the best position, expressed. Previous to the war he had imported in the English market and the Canadian market. During the war, American. At the present time there is almost an equal demand for the English market. During the war, Danish bacon is coming in and the American product has lost much of its reputation owing to carelessness in its preparation. There is a constant demand from English buyers for Western Canadian bacon and it cannot be filled at this time.

Although live shipments are being made to England at present and are being disposed of at some profit, conditions are not ideal. The present approximate figures list costs \$30 to ship an animal from Calgary to the charges, \$60 for ocean freight, and \$10 for shipping and other charges on arrival. Rates like these make it unwise to ship anything but the best quality of stock. It is a good idea that the animals properly pick up at least some of the weight lost in the train journey and during the sea passage.

No Matter What It Costs.

Germany protests that the action of the Allies in establishing a ration system in the Rhenish district is a violation of the Versailles Treaty. Germany feels called upon to use its right of self-defense. It is not forced at all costs—Kansas City Star.

Chinese Haul Convention.

Three hundred Chinese, representing 62 branches of the Chinese Nationalist League in Canada and the United States, recently held a convention in the Rhenish district. It maintains an aviation school at Saskatoon, Sask.

Native to Alaskan waters is a giant crab which, when full grown, weighs 15 pounds and stretches four feet from tip to tip.

KYANIZE MOTOR CAR ENAMELS

An easy working, smooth flowing enamel is produced that can be applied by an inexperienced hand with absolute satisfactory results.

In one operation the surface is painted and varnished with a lustre-proof coat that will not crack, check or peel under severe weather conditions.

Equally good for motor cycles, canoes, stove-fronts and porch or lawn furniture. No mixing required merely follow the simple directions on the label. A quart will finish a runabout or small touring car. Two quarts for large cars or trucks.

Now Beautify Your Home

Your floors, furniture, wood-work can be finished quickly, easily and attractively if you use **Kyanize FLOOR FINISH**. Especially made to resist the wear and tear of foot traffic on floors, it is for that very reason the best finish for **FURNITURE AND ALL WOODWORK**. Enter the clear varnish of white Kyanize Floor Finish. Light Oak or Dark Mahogany. It is not sticky or thin. It is the best and will do.

STRATHMORE'S DEPARTMENTAL STORE

\$15 In The Hole

Mr. W. A. Frohberger, of the Strathmore Bakery was relieved of \$15.00 and costs before Justice Lamont and Victory on Thursday for the offence of making an excavation on the street without obtaining permission of the Chairman of Public Works Committee.

Mr. T. M. Wears prosecuted. Evidence was given by the town constable, as to the hole having been dug.

Mr. F. B. Lally, Town Secretary stated in evidence that Frohberger had asked permission of the Town Council to erect a gasoline pump on his premises. This letter was read also that part of the minutes of Council meeting which stated that the request had been refused.

Frohberger, in his evidence, stated that he had acted in good faith and has no idea of deriding the Council. He understood from Mr. Lally that if he put concrete sidewalk in he could go ahead and it was his intention to do this.

Mr. Kennedy, Imperial Oil representative, gave evidence that he had obtained permission from Mr. Lally to open the street and take out the tank at the Maple Leaf Hotel some time ago.

Mr. Lally, however stated that Mr. Kennedy had informed him that he had permission of members of the Council to go ahead.

The Justices, after retiring to consult, gave their decision as above.

Baseball Last Wed.

The Strathmore Junior team gave a good account of themselves at Langdon last Wednesday evening, the score being 11-4 in their favour.

The Strathmore team was as follows: Griner, left, Baker, 2nd, Brown, s.s., Seaton, 3rd, Anderson, c.f., Dick, c.f., Gray, p. Way, c. Smith, 1b.

A return game will take place shortly at Strathmore. A league is hoped to be formed between Strathmore, Cheville, Langdon, Balfour and Carleton.

Local Meetings

OF LOCAL INTEREST
• Readers are requested to send in items for this column not later than 12 o'clock Monday night.
• preceding day of publication. All local news items are welcomed by the Standard, Phone 17 or 68.

A number of local Musicians will drive to Calgary tomorrow to attend the 10th annual convention.

Mr. Forbes, who spent the first of the week in the city, has returned to his business.

We wonder what gives Freddy the big snore.

Posters are out for the Grand Spree Day, Wednesday, June 15th, in the Strathmore Park. Everyone will want to see the greasy pole walk, tub races, etc. The programme is exceedingly novel and interesting.

The anniversary and memorial service on the old ladies' Lodge will be held on Sunday, June 15th, at 7:30 p.m. at the Union Church. Bro. Rev. T. Philips, P.G. will officiate. All members and the public are cordially invited.

We are pleased to be able to report that Mrs. Rawlings, who is at present in the General Hospital, Calgary, is progressing very favourably toward recovery from her recent operation.

The Strathmore U.F.A. are running a big day on June 23rd. The program consists of some novel events which should make the affair a success. See the ad for particulars.

The Womens Institute will give an "Egg Shower" for Hospital at the home of Mrs. J. Martin, on Saturday, June 12, at 2 o'clock. Tea will be served and all will be made welcome.

Rev. Phillips and Mr. W. M. Marshall attended the annual conference of the Methodist Church held in Calgary during the past week.

Miss M. Pauline Smith, formerly at Convent, was a weekend visitor with Mr. and Mrs. E. H. Langens.

Mr. John Mackenzie, editor of the Standard, left on Friday last to attend the Alberta Press Convention at Edmonton.

The Womens Institute will hold their regular monthly meeting at the home of Mrs. F. DeWitt on Wednesday, June 15th. This will be a short business meeting 2 o'clock sharp.

A meeting of the U.F.A. will be held in the King Edward Hotel on Sunday, day next at 2:30 sharp. All members are requested to be present. At 7 o'clock a meeting will be held in the ladies' hall, when an address on the Jubilee Question, by Mr. Hault of Rockyview, will be given. Every body interested are invited. A picture demonstration will be shown after the address.

Added attractions for the Spree Day in the park Wednesday, June 15, will be a greasy pole chase and a tub race for the day race. The prizes for the sports will be on exhibition this week in the window of Barber and Craighero's store.

Mr. T. M. Wears, barrister and solicitor, has accepted an agency for the insurance from the Alliance Assurance Company, of London, England.

The U.F.A. are holding their annual service June 15th at 7:30, at the Church of England. Rev. A. D. Can are will officiate. Everyone is heartily welcome.

Mr. Kuyvenet is around town taking the census.

Among the many business visitors to Strathmore during the past week were two directrices from Calgary. According to reports received business was never better. Whose fault?

Mrs. Ned Davis arrived on Friday last from the Old Country to join her husband, who, for the past year has been employed in Strathmore. We welcome Mrs. Davis to town.

Wedding

SELKIRK-REYNOLDS
A very quiet wedding took place in St. Michaels and All Angels Church, Strathmore, on Tuesday afternoon at 2:30, when Miss M. C. Reynolds, of Calgary, and Mr. M. L. Selkirk, of the Royal Bank staff, Calgary, were united in marriage by Rev. A. D. Canale. The happy couple left by car for Calgary where they took the evening train for Banff to spend their honeymoon.

The groom is a brother of Mrs. L. D. O. Lohm.

Stomach Treatment Futile For Catarrhal Trouble

Impossible to properly treat Catarrh in the nose or throat by dosing the stomach. To rid the system of Catarrh, send the healing vapor of Catarrhose after the germs, and you accomplish your aim. When you inhale the rich piney essence of Catarrhose, the mucus in the sinuses circulating all through the breathing organs, the cough is eased, sneezing stops, the nostrils are cleared, the throat is healed and freed from discharge. If you want permanent relief from Catarrh, irritable throat, bronchitis, use Catarrhose several times every day. It is safe and sure. Two months treatment One Dollar, small size 50c, all dealers or The Catarrhose Co., Montreal.

The Lamp In The Window

By Frank Wall

It was just a little cottage, standing in a corner of what had once been old John Humphreys' farm. John Humphreys was dead and the farm had been merged long ago in the magnificent grounds of the home built by some unknown millionaire on the crest of the hill.

There were all kinds of rumors about that house, but the only facts were that no one had ever seen the owner or had even heard his name. The house, a palace in white with broad terraces and smoothly sloping lawns, was exquisitely furnished, but only the caretaker and the scrub-woman enjoyed its perfections. Day by day and year by year it stood there, drawing in the warm sunshine, and at night the moon played quietly about its white walls and under glancing shadows across the lawns; and that was the only sign of life there for almost twenty years.

The little cottage stood near the road and was occupied by old John Humphreys' son. He kept himself aloof from his neighbors and was not very popular. There he had no social ability, no human feelings, and perhaps they were right. Ordinarily his face was like a mask, but when rumour came and he placed his little lamp in the window overlooking the road, it softened into an extraordinary tenderness. If the neighbors could have seen him then, they might have changed their opinion of him.

And this had gone on for nearly twenty years. Every night he lighted the little lamp and when he had lighted it he sat by the window watching and watching and watching for someone who never came.

Sometimes there were noisy parties who had motored down from New York, which was only fifty miles away, and they would come and ask for something to eat. He gave them the best he had, and then he would go back to his corner and stare down the unending road.

One night, a furious storm broke over that part of the country. The rain came down in torrents and the wild flashes of lightning lit up the big house on the hill after even more impressive and beautiful. After he had lighted his little lamp, he stood watching the storm, and as he watched he was aware that he was while he was so occupied that he saw an automobile toiling painfully up the steep slope of the road. It came to a standstill opposite the cottage and half a dozen people alighted and hurried up the little path.

They were all young except one, a very beautiful woman of about forty years of age. The others addressed her as Madame Lesin, and the cottage-sitting quietly in his corner, recalled her name as that of a great singer who, after years of struggle, had recently taken New York by storm. They were all artists of one kind or another, full of wild spirits, mocking every convention; and the one they called Madame Lesin was the wildest of them all. Yet there was this difference: that her wildness seemed to be forced. It was as though it struggled all the time with some deeper feeling, as though some secret floor

of her heart had been touched and she wished to hide it. "Let us ask Madame Lesin," cried one in the midst of a furious argument, and the singer turned smilingly. "Jack Montford says that if he were married he would sacrifice even his wife's happiness to his art, if need be; that art is supreme."

"And you, Helen?" "The girl laughed viciously and yet with an undercurrent of sadness. "I don't know," she murmured. "I want to be famous but I want to be happy too. Is it not possible to be both, Madame?"

The singer was staring at a photograph that stood on a side-table. It was a girl of perhaps twenty-three or twenty-four years of age, dressed in some cheap material, obviously village-made, but one scarcely noticed that for the transfiguring happiness that shone in her face.

"Do you see that girl?" she said quietly. "Do you notice how plainly she is dressed? And that cheap little wedding ring at which she is staring so intently? That girl isn't famous and yet she looks happy. And I," she added, as though speaking to herself, "I am not happy, but I can't be happy, for I am not happy."

The cottage had left his corner by the window, as though drawn by the sadness in the singer's voice. "That is my wife," he said hoarsely. "We lived near here, but the lure of New York drew me, and she followed me. I am not happy, and she is not happy."

"Some day perhaps," . . . said the singer, as she turned away. "Every night I light my little lamp in the window and watch for her return," said the man passionately. "At least I hope so," she said earnestly. "See my friends, the stars are over. Who will prepare the car for the journey home?"

The young men of the party raced out all at once and the girls followed a moment later. Madame Lesin turned to the cottage. Her eyes were shining. "They told me you had gone abroad," she said.

The man lifted his hands in a gesture of despair. "For twenty years I have waited here," he said. "And now . . . you have come back, but you are famous. This humble little lamp will appeal to you less than ever."

"I want you," she whispered, "that is all I care about. I would have sworn I never saw you, but I was afraid. And as for the fame you speak of . . . it means nothing to me now."

Her companions were calling her. The man went to the window and took down the little lamp he had tended so faithfully.

"It is for you to decide," he said solemnly. "God knows I want you, but there is no bitterness in my heart now. If you will, you go back to your great world. I will put out this light and there is an end of all my hopes."

The others were at the door now, and the went and stood by her husband. "This is how I answer that question, Helen," she said to the girl, "I left my husband twenty years ago and I have tasted all that fame can offer and now I come back home. You must go on to New York without me. This cottage is my home."

"No," cried the man in a ringing voice. "I have something else to say. You said to me because you said I wasted too much time on that invention I was working on. Well, I justified my ambition as you justified yours." He went across the room and pulled aside the curtain, showing the big house on the crest of the hill, glowing in the moonlight. "That is the result of my invention," he cried. "That is the home to which you have come back."

A Matter Of Sense.

Cardinal Bourne is quite clear that there can be no complete separation of Ireland and England. He does not believe that the Irish want it. For this is a matter, not so much of sentiment, but of sense. Ireland cannot be separated from Great Britain, and the standpoint of national defense may be said that Great Britain cannot live without Ireland. The speaker then dreamily repeats the latter.

The Argonaut.

A Man's Weight In Gold.

How much is a million dollars? One billion worth of coin silver would make a cake nearly fifty feet on an edge. If you were worth your weight in silver, that would not make you rich. The weight of a 160-pound man would be balanced on the scales with \$250 worth of coin silver. His thought is coined gold would be worth only \$40,000.

The present year marks the 400th anniversary of death of Prince de Leon, the discoverer of Florida.

AHAVEN FOR SUMMER

BY LORETTA C. LYNCH
An Acknowledged Expert in All Matters Pertaining to Household Management.

"We are five women who have secured a summer abode where our kiddies may have a good time and to which our husbands may compute daily. It is close to the seashore. The house, however, is very old, and by pulling our funds we were able to purchase it at a low figure."

The men will do the necessary repairs, but it is up to the women to provide for furnishings, and for these we have not much money. There are three large rooms on the first floor and two large ones on the second floor. There is an old windmill on the place, which I believe may be repaired as to provide the house with water. Any suggestions will be appreciated."

When I read this letter I almost envied these fortunate women. It is a find in these days of high prices, and with certain alterations, surely would be most comfortable during the warm days of summer.

Plan to use one of the large rooms on the first floor as a dining room. Have the men construct a long table with folding legs. Use folding camp chairs. Cover the table with plain white cloth. Should you care to use this room for a dancing party, the tables and chairs may be folded up and placed away.

The porch adjoining the front room, which you described in your letter, should be repaired and enlarged and then screened in. It could be used as a sitting room.

Plan to use one of the rooms on the first floor as a room for reading or study, or, on occasion, a guest bedroom.

The other room will, of course, be the kitchen and laundry combined. Adjoining the kitchen, or, entirely separate from it, have the men construct a bathroom. If the windmill is working well, arrange to have it supply water to this bathroom. A shower might be arranged. Several partitions might be made so that several may do bathing costumes at the same time.

The larger room on the upper floor might be partitioned with curtains, or it may be used into berths, one above the other, ship fashion. The larger room might accommodate the women and children and the men might have the other room.

Good mattresses and springs are expensive. Personally, if you are in commuting districts, I should consider the beds and the bedding brought from home by motor.

You say you have not much money to spend on furniture. Most every family who has some article of furniture which seems too good to throw away and yet of which they would gladly dispose. Why not have each of the four families look over their households? No matter what the finish may be, sanderpaper it down, and the million hours or gray hair on the furniture. Seats made of crumple or checked gingham are suitable.

Avoid, however, while in any form for the summer, cane furniture. For the wall, choose some of the composition boards which we find on the modern market. A good green finished board of this type was seen in a seashore cottage last summer. The furniture was Russian brown—made over to this shade—and the kerosene lamp had a shade of soft yellow.

The floor had had its cracks filled with white of the most flake on the market and had been stained dark brown and waxed. Here and there was a green grass ring.

It is my suggestion that each lady do the entire housekeeping for one entire day, with the children, perhaps, assisting her in turn on the day of washing. In this way, each of the five women will have four days' rest out of every five.

Fuel From Sawdust

California Has Been Successful In Solving Problem.

A sample of fuel from sawdust has been received in New Westminster by the Board of Trade from Mr. Walter Thomson, of Eureka, California. Methods of making fuel from sawmill waste have been experimented with in the New Westminster district for many years, but so far none have been evolved that proved to be suitable as a commercial proposition. Apparently the problem has been solved by Mr. Thomson, who is now considering establishing a plant in this district, and is enquiring as to a site.

One New York hotel has 2,300 bath rooms.

Police Force Strengthened

Provision Made for Enforcing Law at Port McMurray.

The importance of Port McMurray as a jumping off place for the great north land, and the fact that the townsite is at the end of the steel of the Alberta & Great Waterways line, has resulted in the Alberta Provincial Police strengthening their Ft. McMurray detachment. It is the anticipation of the police that additional police protection will be required at the steel's end.

Constable J. Smith, formerly of the detachment at Clyde, left Edmonton for Port McMurray recently and will take up his post at that point and operate with Constable J. B. McDonald who has been stationed at Port McMurray for the past three or four years. Two men will also be stationed at Lac la Biche, these being Constables Moses and McCarthy.

Not the Ireland of History According to Government Murders Are Committed by Impaired Gun-

The dragging of a woman out of her humble home in the dead of night and shooting her to death, headless, by her guilty appeals for mercy, and hiding her poor body with bullets under the open sky—surely this is not Ireland! Certainly, it is not the Ireland of history, in whose pages we find chivalry and tenderness and pity and gallant service rendered to worthy causes by a high-spirited race, who took to water, and in the end, find a catch in the throat for all things lovely and exalted.

The Government must be right, and the murders which suffice the check with those are committed by gangs of cultured men, who have been serious scoundrels for whom the saddest of human life does not exist and who will kill for wages, without conscience or remorse. I cannot be so, for it is incredible that any Irishman would commit the inefable crime of murdering a helpless woman, whose appeal for mercy could not be withstood by the fiercest savages.

Bulgarian Labor Law Now In Operation

All Classes of Society Have Been Called to Fulfill Service Duties.

All classes of society in Bulgaria have been called upon to fulfill their service duties under the provisions of the compulsory labor law, which was adopted a year ago. The law provided that men who had attained the age of 20 years and girls who were 16 years old, were to be called upon for a certain amount of compulsory labor for the state.

The number of persons coming within the scope of the law was 700,000, of whom 600,000 have been at work, the labor does comprising road making, sanitary service, digging of canals, grain paving and the building of schools and reading rooms.

Lack of Home Training.

There are four hundred boys under twenty years of age in the penitentiaries of Canada, according to General W. S. Hughes, Superintendent of Penitentiaries. General Hughes is undoubtedly right in putting a large share of the blame on the lack of proper training in the home—Ottawa Packet.

Life's Minor Ailments should be promptly attended to

The National Concern

All Social Progress Is Dependent On Good Health.

Good health is, at least it should be made, a matter of community and national concern, for much of what we call social progress is dependent on it. It is a fact worthy of consideration that a sum of not less than \$700,000,000 in wages is lost through ill-health each year in the United States alone. On an average we lose something like seven days a year from our working time, and when this is multiplied by the number of workers in this country, the sum total is a surprising large number—From the Detroit News.

Evidence Of Progress.

To provide for extensions in the government telephone system in the province of Manitoba and to erect new public buildings this year \$3,870,000 has been voted by the Provincial Legislature.

Migrating From California

Many Families Moving Household Goods and Stock.

A party of twenty families from California passed through New Westminster recently to look at farming lands in the northeast part of British Columbia. Most of these families have already bought acreage, and are moving in their household effects, stock and implements.

The Plant For Winnipeg.

Plans for the erection this fall, or early next spring, of the first unit of a brick and glazed tile manufacturing plant, which will have a capacity of 20,000,000 face brick a year. Deputies of clay used in the manufacture of red built brick are known to exist in close proximity to the city.

Children Cry for Fletcher's

CASTORIA

Fletcher's Castoria is strictly a remedy for Infants and Children. Foods are specially prepared for babies. A baby's medicine is even more essential for Baby. Remedies primarily prepared for grown-ups are not interchangeable. It was the need of a remedy for the common ailments of Infants and Children that brought Castoria before the public after years of research, and no claim has been made for it that its use for over 30 years has not proven.

What is CASTORIA?

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and soothing Syrup. It is pleasant. It contains neither Opium, Morphine nor other narcotic substance. Its age is its guarantee. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic and Diarrhoea; allaying Feverishness arising therefrom, and by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep. Namaka Notes

Mr. and Mrs. W. McKinnon and family, left on Tuesday evening for Smith Falls, Ont., where they will spend their vacation.

Dr. C. Sheets, of California, an old timer in Namaka district, and interested in a farm here died recently. Dr. Sheets, at one time, had a cattle ranch in the neighborhood.

Mumps are prevalent amongst the school children, but the disease is of a mild type.

Mrs. Myers treated the church givers of Namaka to an instructive and intensely interesting lecture on "Mission Work Amongst the Equinox of Alaska."

Mr. and Mrs. Myers spent four years of the missionary and teaching work amongst the unchristianized natives of the far north, and succeeded in improving the habits and religious knowledge of these people. Mrs. Myers claimed that the equinox were very religious, though their superstitions were directed to natural objects, such as the sun, moon, weather, etc., instead of to the Great Giver of all.

Their family relations were worse than polygamous and their mode of living and habits were filthy in the extreme.

Mrs. Myers at the close of her address, made a strong appeal to a large congregation for support of the various missions.

Mr. and Mrs. Myers are occupying the Wootter farm recently purchased by Mr. Stephens.

Mr. Phillips, the regular preacher, is attending the church convention.

Grasshoppers are now hatching out, and it is up to the farmers to keep careful watch and take prompt action.

Nearby Towns will buy Juice.

Prince Rupert, B.C.—During the first two weeks of May, approximately one million eight hundred thousand and pounds of halibut were caught on the fishing banks of this coast. Of this catch all but two hundred thousand pounds entered this port.

Want Calgary Juice

Towns That Need More Power and Light.

Provided the cost of the scheme is not too great, the towns of Okotoks, High River and Nanton will buy electric power from the city of Calgary, by means of high power line constructed from the city to serve these towns.

The scheme has been under consideration for some weeks and officials of the city power department have been in consultation with representatives of the various towns.

It is estimated that it would cost between \$50,000 and \$100,000 to build the power line and plant necessary to serve the towns, which would bear the cost of construction themselves. The city of Calgary would not be put to any expense in connection with the project but would arrange to furnish power at the limits of the city at certain rates, which would be different from the rates of the city of Calgary. The city of Calgary would not be put to any expense in connection with the project but would arrange to furnish power at the limits of the city at certain rates, which would be different from the rates of the city of Calgary.

No definite decision has been reached in connection with the project, the whole matter depending on the cost.

The people of Strathmore are also considering a proposal to purchase power from the city.

Dawson, Yukon Territory—A silver bearing area, which comprises 1,000 square miles, and which assays up to 7,000 ounces of silver to the ton, is being developed by the Canadian government in the Yukon.

One of the things being shipped, which assays 200 to 500 ounces per ton, with stringers of carbonate that go 1,700 to the ton.

All this is handicapping this district, known as Camp Mayo, is the shortness of the open season on the Stewart River, and it may be necessary to build a railway to adequately handle the output.

Irrigation

It is high time to irrigate grain or grass land if water it to be used this year crop. In irrigating a grain crop, a large year crop can be expected unless water is applied early enough to provide plenty of moisture. The plants will not be checked in growth and can form heavy heads. There is a further reason for early irrigation, in that if the growth is checked by drought, the time of ripening will be made later.

As some one has said, "Early irrigation for grain and late irrigation for straw."

Another practical point, is that it takes some time to irrigate a field. The last minute, only a small portion of grain and the job is put off until it will have been irrigated at the right time.

A number of farmers have had fields of irrigated wheat grading down from 20 bushels per acre where the water was first applied, to 2 bushels per acre on the dry land.

Irrigation before the crop is suffering simply stores a large supply of water in the soil to be drawn upon later. The objection is made that it may rain and there will be too much water for the good of the crop. This will, however, depend on several factors.

In this particular year of 1921 there was little moisture carried over from the preceding year and while there was an average of 1.47 inches precipitation in April and 4.22 inches in May, this has not furnished a surplus.

In most cases the subsoil will take care of a reasonable excess of water without detriment to the crop. Under present conditions it would seem very improbable that enough rain could fall to render irrigation superfluous or detrimental considering the dryness of the subsoil.

Reverting the favourable crop conditions in 1915, there was at Strathmore that year 6.11 inches precipitation in April, 2.42 inches in May, 4.77 inches in June and 4.14 inches in July or a total of 13.19 inches from April 1st to August 1st.

On well prepared land and under proper irrigation, would average from 6 to 9 inches, but can be made heavy or light as desired.

Since our lands are not prepared in most cases, the irrigation would vary more and not give as uniform and satisfactory results, also the labour of irrigating rough land is very much greater.

However, if large field ditches are placed at intervals of 60 to 100 feet apart, and the field to be irrigated, beneficial results can be obtained as nearly everybody knows from their own experience.

From our own experience we are of the opinion that in most years irrigation should be started on the areas and hay land during the last half of May and the spring planted grain in June which means that the ditches should be plowed out as soon as seeding has been finished so that irrigation on grain land can be started about June 1st or the last week in May.

The season of 1920 was a notable exception to this practice and no invariable rule can be laid down.

It is worth while studying rainfall records and crop requirements. Grass or hay crops take twice as much water as grain crops.

Early irrigation is safest and best when irrigation is required. A high crop yield and economical results from irrigation can only be had from land properly graded, smoothed and ditched for irrigation.

ROBERT S. STOCKTON.

Winnipeg, Man.—A delegation of the civic housing commission will request the government for at least \$100,000 of the additional \$200,000 housing loan passed recently by the legislature.

The commission have approximately \$223,000 left which is being dispersed at the rate of between \$20,000 and \$30,000 at every meeting.

Victoria, B.C.—British Columbia will use airplanes to fight forest fires this year. Twenty thousand dollars have been set aside by the government for this purpose.

The planes will be used for locating the exact position of a fire and then rushing fire fighters and equipment to the scene.

Winnipeg, Man.—Construction work on the provincial telephone system costing approximately one million five hundred thousand dollars will be commenced this June by the provincial government, according to J. J. Lowrey, Telephone Commissioner of the province of Manitoba.

Calgary, Alta.—Fifty oil drilling outfits will be in operation in Alberta by the middle of this summer, according to present indications. The Imperial Oil Company are behind about twenty of these, while other prominent British and American interests are promoting other companies.

The vigorous work will take place in practically every district from the Montana border to the Fort Norman discovery well.

Ottawa, Ont.—Canadian expenditures on naval and military defense are the lowest of any country in the world, according to a statement of the Minister of Militia in the House of Commons, the per capita expenditure for defense, including that for militia, naval and air forces, being only \$1.82.

The percentage of annual revenue to be devoted to defense purposes this year is 2.5 per cent.

Ottawa, Ont.—The area estimated to be sown to fall wheat for 1921 was 792,280, of which 728,500 acres were in Ontario, 28,300 acres in Alberta, and 14,900 acres in British Columbia, according to the first crop report of the season issued by the Dominion Bureau of Statistics.

The proportion winter killed are reported as eleven per cent in Ontario and five per cent in Alberta; in British Columbia the crop was practically unharmed.

St. John, New Brunswick—Grain shipments by the Canadian Pacific Railway through the port of St. John during the season just closed aggregated 9,411,000 bushels. Of this amount 6,165,000 bushels were wheat, 195,000 bushels oats, and the balance other grains. An interesting comparison in shown by statistics compiled in 1897-98. In that season, shipments totalled 2,552,221 bushels, of which quantity wheat absorbed 947,174 bushels, oats 1,265,181, and balance other grains.

Calgary, Alta.—Wheat seeding in the Province of Alberta is completed, the state of the land seeded being "excellent" to report somewhat later than last season, when more than 10 million acres were sown. This will probably be offset, however, by a smaller acreage devoted to oats and other grains.

Calgary, Alta.—It is estimated that "thousand acres" will be built in the Province of Canada. This is the first time in the States, which has made a specialty of erecting silos, have secured orders for two hundred of these structures to be erected in Manitoba alone. Saskatchewan farmers will build several this season.

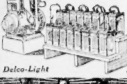

Safety

In the stable and milking sheds is assured with

DELCO-LIGHT

This complete electric lighting system is the safest and safest protection you can get. It will supply all the light you require, and also necessary power for milking machines and other small farm machinery, such as churns, cream separators, etc. Come in and see it work.

To the Strathmore War Memorial Fund

The primary object of the Memorial Hall is to erect a permanent monument to our dead in the Great War.

It will also be a first-class Community Hall. The public's interest in the hall is guaranteed by agreement between the G.W.V.A., M.P. Bow Valley, and Strathmore Town Council, by which it cannot pass from the possession of these three bodies into the hands of a private individual or company. It is an example of real community effort endorsed by the U.F.A., the other bodies mentioned above, and every public body in the town and district.

Your subscription will be very welcome. The hall is under construction now, and it is now that your contribution is wanted.

Members of the G.W.V.A. and others carrying the official receipts from the Hall Committee can take up their subscriptions, or they can be handed direct to H. H. Forward, Secretary, Treasurer Hall Committee.

Subscriptions from Nanaka District will be gladly received by Messrs J. B. Sim and Emie Wilson.

Third Crop Report

Reports from all parts of the province by mail correspondents and by travelling agents of the department indicate that general crop conditions are practically favourable. During the past two weeks sufficient rain has fallen in practically every part of the province. The weather for the past week has been somewhat cool with light frost reported over a wide area and causing slight damage to some of the growing crops and garden stuff. This was not serious however, in any district. From the fifteenth to the twenty-fifth of the month the weather was exceptionally warm for the time of the year. As a consequence the early sown crops got a good start. The wheat is up from five to seven inches above the ground, and the early sown oats are well advanced, both crops showing fine color.

On account of the particularly fine season for seeding the acreage sown will be larger than was anticipated in the first crop report. Wheat seeding is now completed and will show an increase in acreage over last year about twenty per cent. Corn, in the Peace River and Grand Prairie districts report an increase of forty per cent in acreage. Fifty per cent of the acreage of oats is threshing purposes is already seeded and about fifty per cent of the barley is in. Most of the oats for green feed are yet to be sown. Data for threshing purposes will show a decrease of about twenty-five per cent. Barley will show an increase of about thirty per cent. The potato acreage will remain about the same as last year with a slight increase.

Up to the present time grasshoppers have not done any appreciable damage but are commencing to hatch in various localities. Slight damage has been reported on account of wind and cutworms in Southern Alberta. As the two early yet to predict what the harvest will be. However, conditions are as promising at the present time as they have been for several years past.

Live Stock

On account of the warm weather and plenty of moisture the grass has made a splendid start. Live stock came through the winter in good condition and are making rapid progress.

JAMES McCAGG, Crop Statistician.

Ardenode Notes

One of the most profitable and interesting meetings that we have had this spring was held at the home of Mrs. H. Gohard on Wednesday last. After a short regular session was held, Dr. Tiffin, of Rockyford, gave us a talk on "First Aid," which was appreciated by all. Messrs. present were: Mrs. Dawson, Mrs. Horricks, Mrs. James and Miss Anna James, Mrs. Chamberlain, Mrs. Kerne, Mrs. Seeley, Mrs. H. Gohard, Mrs. J. Gohard, Miss May Gohard, and Mrs. J. Booth. Visitors present were: Mr. and Mrs. H. Dugan, Dr. Tiffin, Miss Valentine Dugan, Mr. A. Dugan, Mr. C. Veale, Willie Seeley and Mr. H. Gohard. After the talk by Dr. Tiffin, dairy refreshments were served, this was followed by music and a general mingling of the crowd.

On Wednesday June 8th, a joint meeting of the U.F.A. and the U.F.W.A. will be held in the school house at 7:30 p.m.

Mr. and Mrs. J. Gohard, Miss May Gohard and Mr. Herbert Smith motored to Calgary one day last week.

The next meeting of the U.F.W.A. will be held at the home of Mrs. James on Wednesday, June 15.

Calgary visitors from here last Friday were: Mr. Jacob Harsert, Mr. T. Chamberlain, Mr. and Mrs. J. Henderson, Mr. O. R. Booth, and Mr. and Mrs. J. L. Booth.

Mr. Jim Gohard is doing some threshing for Mr. Horricks. The crops are looking fairly good after the wind storm and frost.

The U.F.A. are sending down some slides, of interest to farmers, to be shown in the school house in the near future. Mr. Schofield will also give a talk. Look for posters of this event.

Prevent the Hopper Menace

Many farmers have reported the steady advancement of the grasshopper menace in our district. The hot weather of the past few days will aid and hurry the hatching of this pest.

It is the intention of many of the farmers to straw along the fence rows, and destroy the hoppers by fire after they have come to mass in the evening. This will help to save the 1921 crop; and it is hoped that every farmer in the district area will do their utmost to prevent the spreading of this pest.

We have just been informed by Mr. W. A. Way, Secretary of the Municipality, that mixing stations will be located at Carleton and Strathmore for the distribution of poison.

Any persons desiring to make use of these stations should do so immediately before the grasshoppers get beyond control.

Cheadle Notes

Mrs. John Lyons and son Bert have been visiting in the district for a few days.

Little Frank Cowell is reported to be much better but the danger point is not passed yet.

The Cheadle Social Club held a dance in the hall on Friday the 8th, which was a huge success. Quite a number of visitors from Strathmore and Carleton attended.

The Cheadle and Langdon School Baseball teams played at Cheadle Friday afternoon and Cheadle won with a score of 12-4.

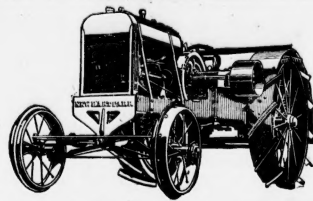

There will be a sports day in Cheadle in the near future. Details of which are not all completed yet.

Listed Lands

In order to provide prospective purchasers with information as to where suitable land may be obtained in the more settled districts, the Department of the Interior, through its Natural Resources Branch, has compiled and published particulars regarding unoccupied privately owned farm lands for sale in this locality. The object of this publication is to assist in the settlement and development of lands now lying idle.

Important details are given concerning each farm such as the area, fit for cultivation, nature of soil, distance from railway and terms of payment. This information should be of great use to prospective purchasers or those interested in inducing settlers to locate in this vicinity.

The list for the district which is known as No. 15 may be obtained free of charge upon application to the Natural Resources Intelligence Branch of the Department of the Interior at Ottawa.

Type of Hart-Parr 30 Motor Same As Twenty Years Ago

The motor is the heart of the tractor. It is the source of power, and you buy a tractor for power only.

The motor that was used in Old Hart-Parr No. 1, built in 1901, was fundamentally the same type of motor that is used in the Hart-Parr 30 to day. It is built in the Hart-Parr factory and had they found a type that was better for tractor power they would build it.

For a long time Hart-Parr Company have had out a questionnaire asking for arguments for the two-cylinder and four-cylinder type of motor in a tractor. To date it stands as follows:

ADVANTAGES OF HART-PARR 30 TWO-CYLINDER TWIN MOTOR

1. Less engine experience needed to operate.
2. Handles kerosene better.
3. More accessible.
4. Lower cost per horse power.
5. Half the ignition trouble.
6. Half the valve trouble.
7. Only two main bearings. Cannot get out of line and break crank shaft.
8. Few bearings, and these may be oiled by mechanical oiler.
9. Less peering because of lower engine speed and less reduction.
10. Best type of bearing may be used because of less reduction to wheels.
11. Less power lost in transmission.
12. Less jacket walls on cylinder, hence more uniform cooling.
13. Easier to cool with radiator.
14. Sturdier, more rugged parts.
15. Slower speed, hence longer life.
16. Less wearing parts.
17. Heavy duty engines have always been one or two cylinders.
18. With cranks at 180 degrees, they may be very well balanced.
19. Similar to stationary engine.
20. Better belt power.

Make a list of 4-cylinder advantages in comparison

Can you doubt the evidence that is shown in this comparison and by the superior performance of the Hart-Parr 30 on the farms of thousands of owners? Let us show you the tractor or send you literature. Buy now—You may not be able to get one on short notice.

Many of the old Hart-Parrs that power the big farms of the West, the best known of them being No. 1, built in 1901.

H. J. ANDERSON & SON
STRATHMORE, ALBERTA

A POWERFUL STURDY THREE-PLOW KEROSENE TRACTOR
HART-PARR 30
BUILT BY THE FOUNDERS OF TRACTOR INDUSTRY

IF YOU are doubtful whether it for your farm, go to the man who will pay you to buy a Ford Truck owns one and ask him. Or we will come to you and will tell you what dozens of Ford Truck Owners have told us—that the Ford Truck is positively a paying proposition.

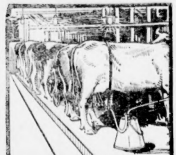

It brings the best markets to your door. It solves the hauling problem on the farm and between the farm and the city. It does a dozen different jobs every day and stands the wear and tear of farm work under all conditions.

We give quick and efficient service for Ford Trucks and Cars.

W.C. Brown, Dealer Strathmore

Calgary, Alta.—Wheat seeding in the Province of Alberta is completed, the total area of the land seeded being, according to report somewhat larger than last season, when more than four million acres were sown. Type of Hart-Parr 30 Motor Same As Twenty Years Ago

The motor is the heart of the tractor. It is the source of power, and you buy a tractor for power only.

The motor that was used in Old Hart-Parr No. 1, built in 1901, was fundamentally the same type of motor that is used in the Hart-Parr 30 to day. It is built in the Hart-Parr factory and had they found a type that was better for tractor power they would build it.

For a long time Hart-Parr Company have had out a questionnaire asking for arguments for the two-cylinder and four-cylinder type of motor in a tractor. To date it stands as follows:

ADVANTAGES OF HART-PARR 30 TWO-CYLINDER TWIN MOTOR

1. Less engine experience needed to operate.
2. Handles kerosene better.
3. More accessible.
4. Lower cost per horse power.
5. Half the ignition trouble.
6. Half the valve trouble.
7. Only two main bearings. Cannot get out of line and break crank shaft.
8. Few bearings, and these may be oiled by mechanical oiler.
9. Less gearing because of lower engine speed and less reduction.
10. Best type of bearing may be used because of less reduction to wheels.
11. Less power lost in transmission.
12. Less jacket walls on cylinder, hence more uniform cooling.
13. Easier to cool with radiator.
14. Sturdier, more rugged parts.
15. Slower speed, hence longer life.
16. Less wearing parts.
17. Heavy duty engines have always been one or two cylinders.
18. With cranks at 180 degrees, they may be very well balanced.
19. Similar to stationary engine.
20. Better belt power.

Make a list of 4-cylinder advantages in comparison

Many of the old Hart-Parrs that showed the highest efficiency of the motor, and the fact that the first Hart-Parr was built in 1901.

STRATHMORE,

ALBERTA

A POWERFUL STURDY THREE-PLOW KEROSENE TRACTOR
HART-PARR 30
BUILT BY THE FOUNDERS OF TRACTOR INDUSTRY

IF YOU are doubtful whether it for your farm, go to the man who will pay you to buy a Ford Truck owns one and ask him. Or we will come to you and will tell you what dozens of Ford Truck Owners have told us—that the Ford Truck is positively a paying proposition.

It brings the best markets to your door. It solves the hauling problem on the farm and between the farm and the city. It does a dozen different jobs every day and stands the wear and tear of farm work under all conditions.

We give quick and efficient service for Ford Trucks and Cars.

'OUT OF THE SNOW'

WATCH FOR THE DATE

Grasshoppers Appear

Grasshoppers are reported to be in work in several parts of Southern Alberta. The cool weather of the past week has retarded the hatching process, however they have hatched in sufficient numbers in some districts to warrant the conclusion that large numbers will appear as soon as warm weather sets in. From investigations which have been made, as many as 2,000 eggs per square foot have been found and from 80 to 85 per cent of these eggs have hatched under artificial incubation.

The Department of Agriculture through the Schools of Agriculture has organized the province into sections for the purpose of putting control measures into effect. Each School of Agriculture will be responsible for its own district. Men from the staff of the Schools and others which will be supplied by the Department, will be available to attend meetings and to give whatever information and assistance is possible in the campaign. A good deal of damage was done to the young growing crops last season throughout the provinces of Manitoba, Saskatchewan, and over a very considerable area of Southern Alberta. The use of poison here consisting of bran molasses and arsenic with the addition of a small amount of salt of the juice of lemons, has proved to be a question to be entirely effective in destroying the hoppers if used in the early season. The department has already on hand large supplies of this poison salt stored at the Schools of Agriculture, these Schools being located as follows: Youngstown, Haysman, Cheltenham, Cheltenham, and Vermilion. This bait will be sold at cost to anyone who makes application to the nearest School of Agriculture. The bait will cost from \$20 to \$25 per ton and arsenic 50c per pound at points of shipment. Full information respecting the mixture, method of mixing and application may be secured by writing to one of the Schools of Agriculture. From experience gained last year in Alberta as well as in Manitoba and Saskatchewan, hoppers may be entirely controlled provided the farmer in the district infested co-operate in the campaign of poisoning. On the other hand, very serious loss may result if the farmers generally do not use every means in their power to destroy the hoppers on their farms. In the work which was done last year in Southern Alberta the hoppers could be found dead in large numbers from 12 to 26 hours after the bait had been scattered. In several cases which were seen by officials of the Department, portions of fields were entirely destroyed before poison was applied. Immediately after two applications of the poison, the work of the hoppers had practically ceased and in every case where the poison was properly mixed and applied early in the morning over a period of two weeks, the hoppers were completely destroyed. If the work is undertaken seriously by the people in the district where this pest appears, the members of the Department are satisfied that the results of destruction from grasshoppers will not materially affect the yield of crops. Furthermore, if the poisoning during the present year is effective in every part of the province, the possibility of an outbreak in 1921 will be greatly lessened. In the other hand, if effective measures are not adopted, and hoppers are allowed to hatch and develop to maturity, eggs will again be laid by the adult hoppers and in all probability will prove a menace next year. Some parasites were noticed last year, working on the adult hoppers, but they are not found in sufficient numbers to seriously reduce the number of hoppers.

The Department would respectfully urge upon every citizen the importance of doing everything possible to eradicate this menace. Factors such as the lack of moisture and heavy winds may reduce the yield of crops, but these are luxury out of the control of human beings. In the case of grasshoppers, however, the remedy is at hand and it is hoped that the work will be efficiently and carefully done.

H. A. CRAIG,
Dep. Min. of Agriculture.
